# PROCUREMENT

## EASY TO PROCURE. ROLLED OUT UNIFORMLY. VISIBLY ON BRAND.

You manage suppliers, workwear and procurement for several sites and are rarely active because of the health argument. You decide on practical feasibility and want a clear process with no surprises after approval. The price is stated here: EUR 120 per pair, plus VAT. The pilot with 10 pairs costs EUR 1,200 plus VAT. Ordering route, delivery and service terms are still open and appear below as placeholders.

## WHAT YOU NEED TO BE ABLE TO STAND BEHIND IN THE MEETING

| | |
|---|---|
| **1 THE ROLE'S QUESTION** | Is it standardized, clearly priced and easy to procure?<br>In the decision team, you turn it into a process that holds up. Your goal is to standardize procurement, keep costs under control and not impose a special process on the sites. |
| **2 CORE MESSAGE** | **"EASY TO PROCURE. ROLLED OUT UNIFORMLY. VISIBLY ON BRAND."** |
| **3 HOW THIS PAGE SEES IT** | The pilot needs a defined test group, a documented ordering route and clear statements on price, quantities, design and service framework.<br>Today such purchases usually go through standard insoles, existing workwear providers or local procurement as needed. They are held back by unclear minimum quantities, returns, delivery problems and branding that cannot be rolled out.<br>The pilot fits with new workwear, a brand rollout across several sites, the opening of a site, or when a first test in the team has brought positive feedback. |
| **4 THE PILOT COUNTS AS A SUCCESS IF** | an order is possible without a special case, queries are answered clearly and the test group causes no unplanned effort at the sites. |
| **5 WHAT IS NEEDED BEFORE APPROVAL** | Price and quantity logic, design options, ordering route, complaints process and delivery and service terms that have been specifically approved. |

**Next step: Check the pilot offer against the procurement standards and tie the approval to a clear process. Contact: Roderich. Get in touch on the VIANU B2B page.**
