VIANU

WHO DECIDES WITH YOU?

OCCUPATIONAL SAFETY

EXPLAINED OPENLY. CLEARLY DELIMITED. DESIGNED FOR DAILY WORK.

You are rarely the sole budget decision-maker, but without your trust the project will not be approved. At a site inspection or in the occupational safety committee, you want to be able to point to a realistic, clearly limited addition. VIANU offers the insole as a supplementary comfort offer for work and professional shoes. It replaces no protective measure and no workplace design.

WHAT YOU NEED TO BE ABLE TO STAND BEHIND IN THE MEETING

- [ ] THE ROLE'S QUESTION

  Is the solution responsible in daily work and clearly delimited? In the decision team, you check the limits. Your goal is to take physical strain seriously and to classify measures in a way people can follow.

- [ ] CORE MESSAGE

  “Explained openly. Clearly delimited. Designed for daily work.”

- [ ] HOW THIS PAGE SEES IT

  First the scope: a supplementary comfort offer that replaces no protective measure. Then how data is handled. Then the evidence, at the level it can support. Today this is covered by workplace design, anti-fatigue mats, standard shoes, general workplace health offers or no additional measure. A project is held back by unclear medical statements, safety risks, unresolved hygiene and unresolved data processing. The pilot fits when a risk assessment, noticeable strain in kitchen, service or housekeeping, or recurring feedback from the teams gives the occasion.

- [ ] THE PILOT COUNTS AS A SUCCESS IF

  the limits of the product are clear to the participants, no avoidable objections on hygiene or data arise and the pilot is not read as a replacement for other protective measures.

- [ ] WHAT IS NEEDED BEFORE APPROVAL

  Material and hygiene information, exclusion criteria and the data process.

Next step: Check the pilot scope against the risk assessment and give the test group technical approval. Contact: Roderich. Get in touch on the VIANU B2B page.
