MANAGEMENT AND OPERATIONS

START SMALL. DECIDE WITH A SOUND BASIS. SCALE ONLY WHEN THERE IS ACCEPTANCE.

You run a business or several sites and think in shifts, utilization, guest experience and the people who keep the business running. You do not want to improvise around staff gaps and overtime every day. You do not commit to a rollout: A pilot with 10 employees shows whether your team accepts the insole, and only then do you decide on more. VIANU makes no statement on sick days, turnover or performance.

WHAT YOU NEED TO BE ABLE TO REPRESENT IN THE MEETING

THE ROLE'S QUESTION	How do I keep shifts stable and the team performing? In the decision team, you set priorities. Your goal is to keep shifts stable, secure the guest experience and not put extra strain on the team during peak times.
CORE MESSAGE	**"START SMALL. DECIDE WITH A SOUND BASIS. SCALE ONLY WHEN THERE IS ACCEPTANCE."**
HOW THIS PAGE SEES IT	A small test group, clear feedback and only then a well-founded decision on expansion. Today many people get by with one-off solutions, fixed anti-fatigue mats at single stations, general benefits or no targeted measure. A project is held back when it ties up budget, stays without a visible result and disrupts operations. The pilot fits with high pace, difficult shift planning, visible strain and limited availability of good employees.
THE PILOT COUNTS AS A SUCCESS IF	the pilot fits into the shift routine, employees accept it and shift leads report no disruptive interruption.
WHAT IT TAKES BEFORE APPROVAL	A one-pager on the process, the time needed per team, responsibilities, clear product limits and the date of the evaluation.

Next step: Sponsor a test group of 10 employees, set a date for the evaluation and only then decide on scaling. Contact: Roderich. Get in touch on the VIANU B2B page.
